The City of Raleigh, a municipal corporation organized and operating under the laws of the State of North Carolina, is issuing this RFP for software services support for then end-to-end front end design and development of web widgets or 'mini-web pages' in HTML, CSS, Javascript that visualize and structure open data for deployment in the city's search results. The five (5) widgets for our search visualization service will be pulled into our search results pages for the most common keyword clusters using a middleware created by City of Raleigh IT development team. The City expects to work with the Contractor using an agile project management methodology that includes iterations of user testing, web design, front end development, and integration testing with City of Raleigh employees in order to maximize success and minimize cost. The RFP is being issued by the Open Data and GIS division of the Information Technology Department.
